To take away xm radio services would be a huge disservice to the community I am an over the road driver and I depend on xm for my entertainment as well as the latest addition of traffic and weather to be able to have this information before I get to one of the cities greatly helps my travel time by knowing what is the best route to avoid delays or inclement weather
Never before have we had this with fm this information is not available until we are already in the city and it is too late to change our route
It also helps to in driver attention without having to search for available stations in the area and taking our attention off of our driving
In my opinion every driver in america should have this service
